CONCEPT NOTE

Increasing frequency and impending disasters in varied forms have a wide array of effects in varied forms, leaving a lasting impact on the socio-economic and other dimensions of a state. The need of the hour calls for pragmatic strategies and coordination among various stakeholders to mitigate disasters to ensure minimalistic effects of these incoming phenomena. One of the key areas that needs to be addressed in this regard is identifying the gap that lay in the infrastructural scope of institutional buildings and constructing infrastructures that are disaster-resilient. The identification of the loopholes and proper planning and strategizing in this dimension would go a long way in withstanding the present and future disaster & climate risks. Technical standards, employing state of the art-technology coupled with proper mapping of the landscape would serve as a key anecdote in building up the resilience of buildings and infrastructure. Review of the current institutional buildings in their capabilities to be disaster resilient is a mandatory obligation that needs to be undertaken on a regular basis, in consultation with the state and other key players in this aspect. This would call for regular updation of the technical standards of the current institutional buildings and strict monitoring and overseeing their resilience-based effectives in the advent of a disaster. Implementation of standards in planning, implementation and management phases of the entire lifecycle of the infrastructure indicate wide scope for incorporating principles of resilience in technical standards. There is also a need for great emphasis on coordination and effective facilitation among the state and international organizations to ensure effective implementation of ideas and strategies for building Disaster resilient institutional buildings.

ABOUT THE HOST ORGANISATIONS

NATIONAL INSTITUTE OF DISASTER MANAGEMENT

The National Institute of Disaster Management (NIDM) was constituted under an Act of Parliament with a vision to play the role of a premier institute for capacity development in India and the region. The efforts in this direction that began with the formation of the National Centre for Disaster Management (NCDM) in 1995 gained impetus with its re-designation as the National Institute of Disaster Management (NIDM) for training and capacity development. Under the Disaster Management Act 2005, NIDM has been assigned nodal responsibilities for human resource development, capacity building, training, research, documentation and policy advocacy in the field of disaster management. NIDM provides Capacity Building support to various National and State level agencies in the field of Disaster Management & Disaster Risk Reduction.
